MTS®

Master Tutoring System

BlueEyes®

Features

- Include FL function
- Management of teachers and students
- Online reservation
- SMS function
- Convert to MP4 format automatically
- Attendance management
- Automatic operating

Barcode & Sensor ID Card

MTS applies the barcode and sensor systems to achieve the automated management. Everything can be carried on through the barcodes and sensor ID cards.

Automatic Lectures Pushing

After students make the reservation, MTS will push lectures to the assigned STB at the appointed time automatically. Everything is automated!

Reservation

When the students didn't attend the classes and would like to view the lectures, MTS can manage it! What the students need to do is make the reservation via MTS.

Attendance Managing

Attendance managing is a very important function of MTS. As long as scanning the barcodes or cards, MTS will generate the attendance record automatically.

Point System

To manage the lectures' viewing, we design the point system in MTS. You can define the points for lectures. Once viewing the lectures, the point will be reduced from the students' account. MTS helps you to manage it!
